ADVANCE INFORMATION

Title Windpower Workshop

Author Hugh Piggott

Keynote Updated version of the best selling step-by-step guide to designing and building a wind generator from scrap and recycled parts.

Description

As one of civilisation's oldest forms of mechanical energy, windpower has long provided the closest thing to being able to 'magic' clean energy from thin air. As the true costs of fossil fuel use have been unmasked, the ancient art of windpower has made a steady comeback. A growing number of countries are now promoting wind energy generation as part of a drive towards a sustainable future. Yet many environmental and 'gadget' enthusiasts prefer a far more DIY approach. What *Windpower Workshop* provides is essential information for the individual wanting to build and maintain a Windpower system for their own energy needs.

Sales points

- Provides a practical approach to a topic that has long been neglected
- Gives those in isolated areas a DIY means to generate their own electricity
- Includes a glossary of terms and is clearly illustrated throughout
- Teaches how to construct systems with inexpensive scrapyards and recycled parts

Author biography

Hugh Piggott runs his own successful windpower business from his home in Scotland, where he advises individuals and companies in Britain and abroad on windpower turbines and systems. He has been teaching others how to build windmills for twenty years and was recently featured as a windpower advisor on BBC TV programme *Castaway*.
