

A
C.A.T. BIG IDEAS book.

The Water Trail

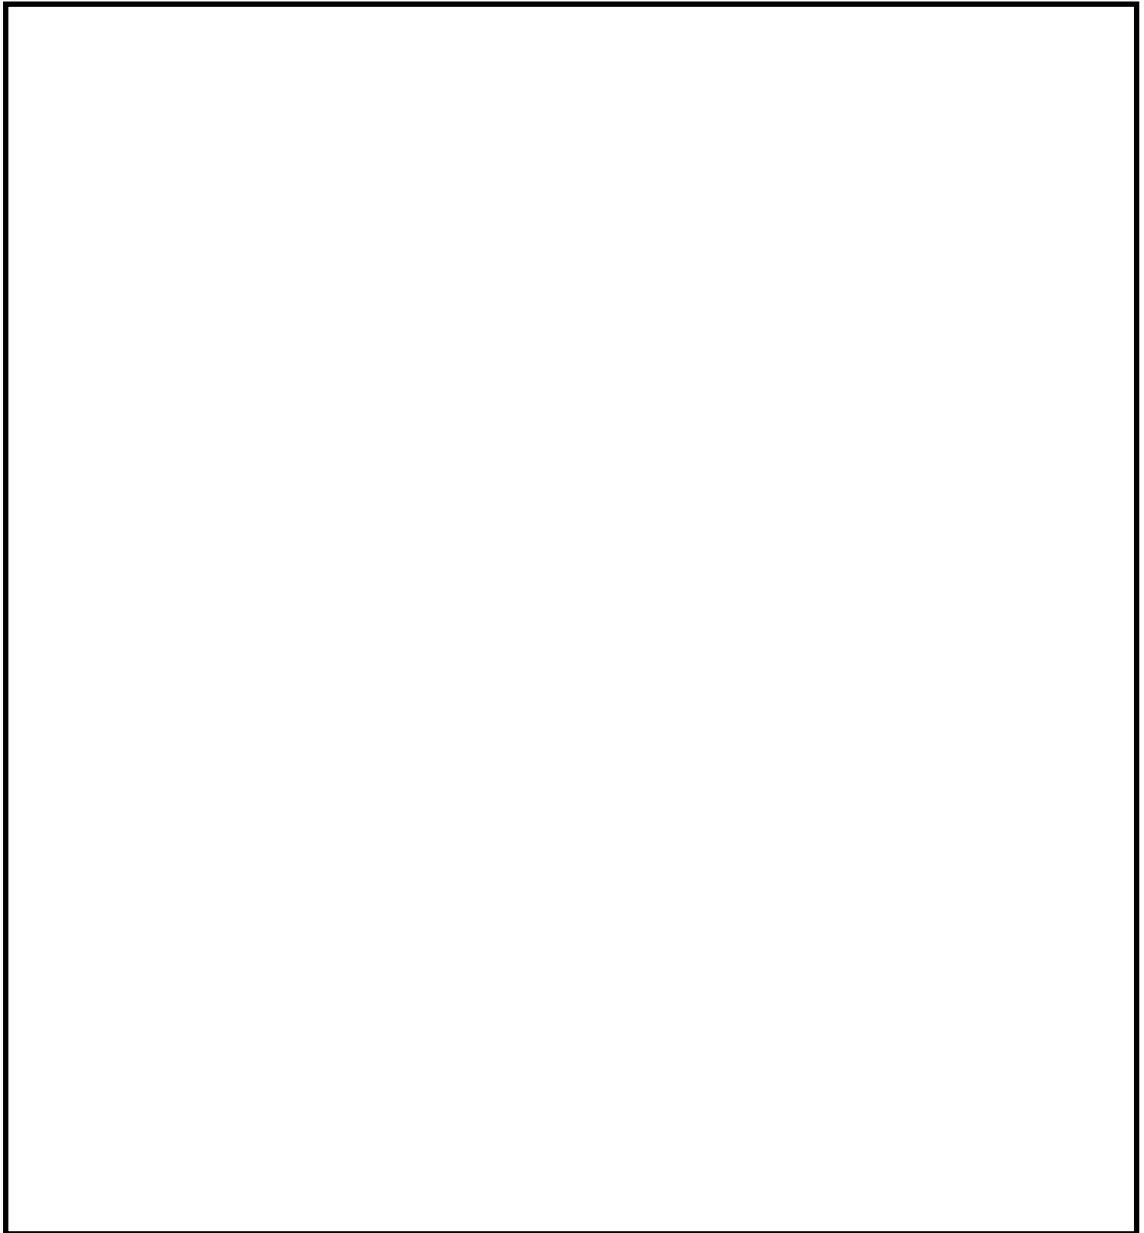

Written in collaboration with The Green Egg Company, Aberystwyth

Page 1

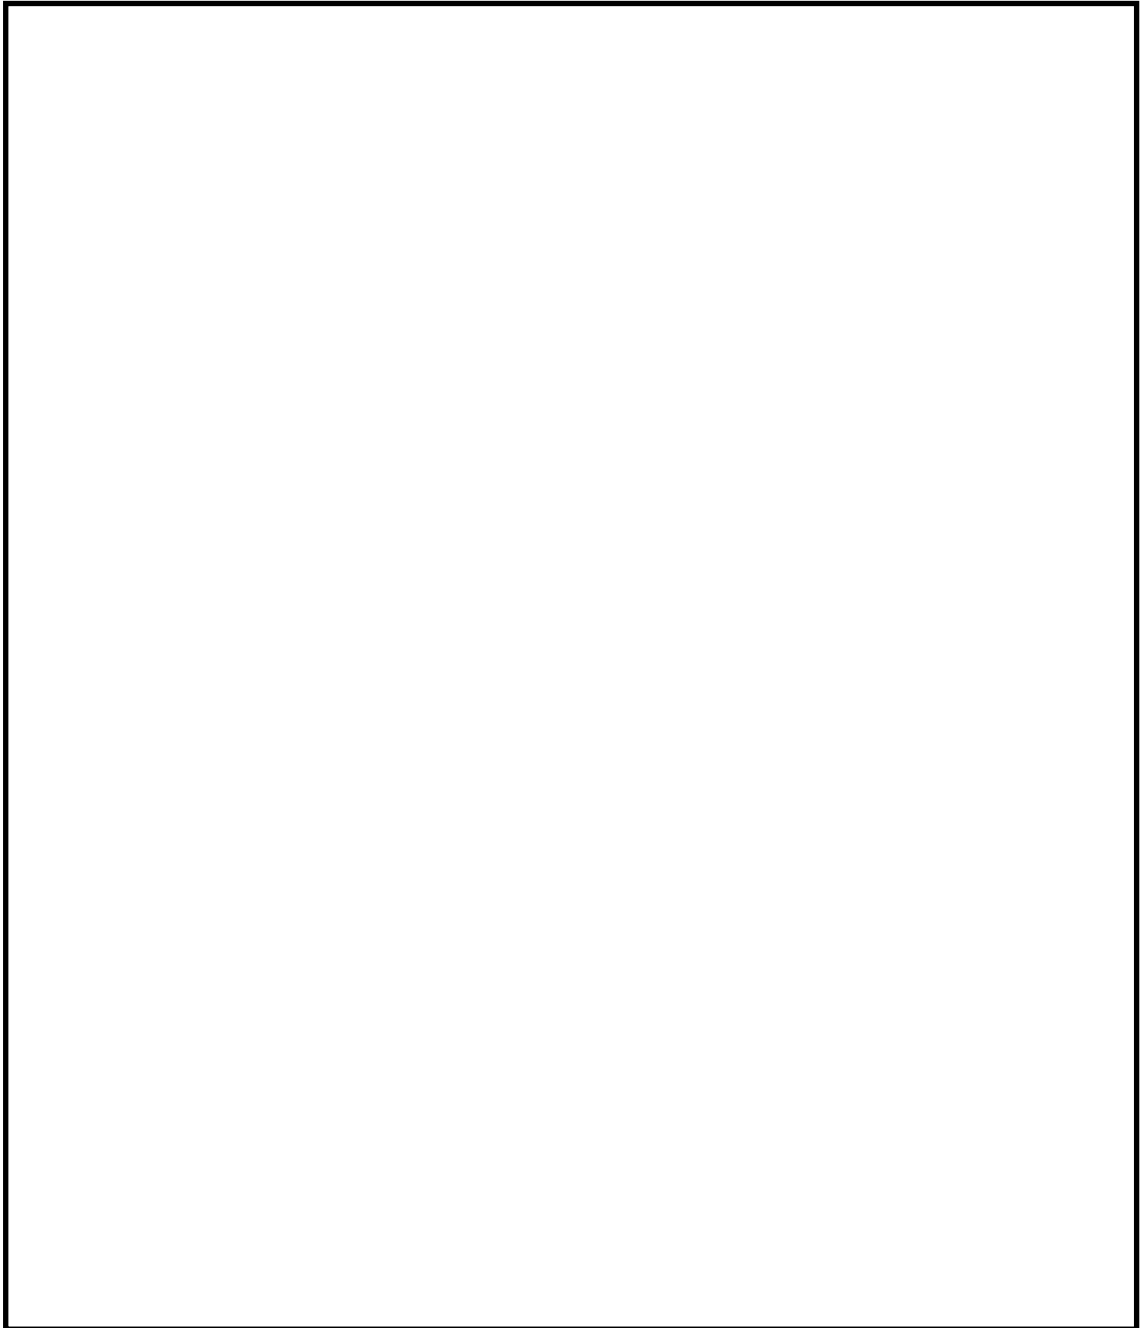

Water comes
down the hill
inside a pipe.

The pipe goes past
the pump.

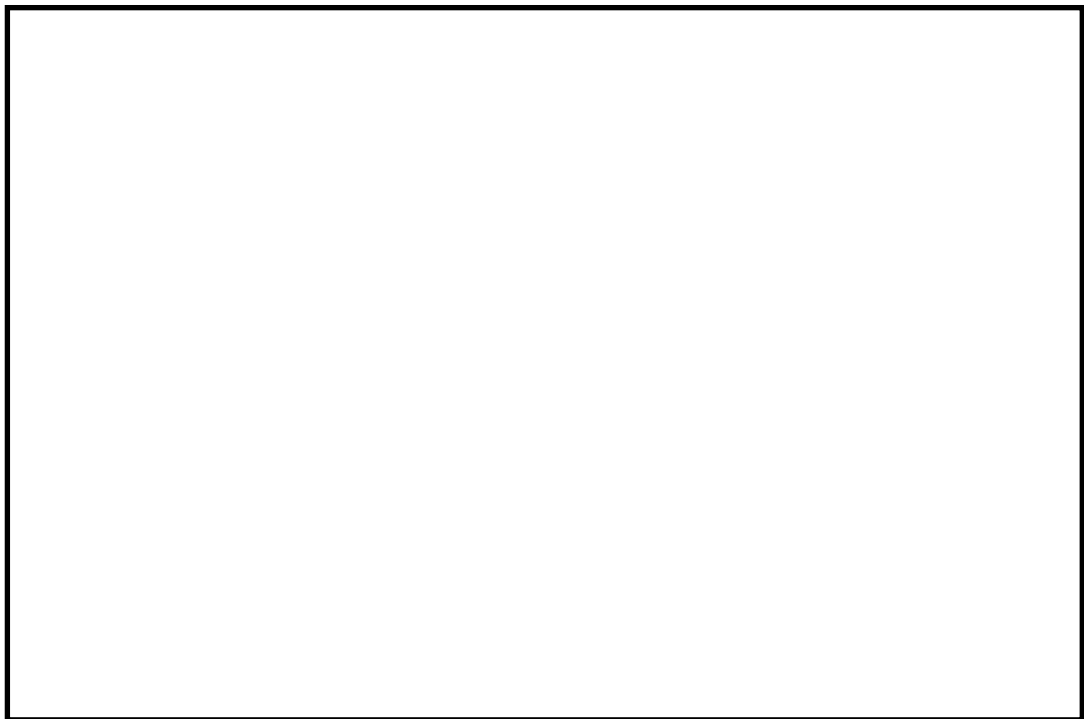

The pipe goes near
the wave tank.

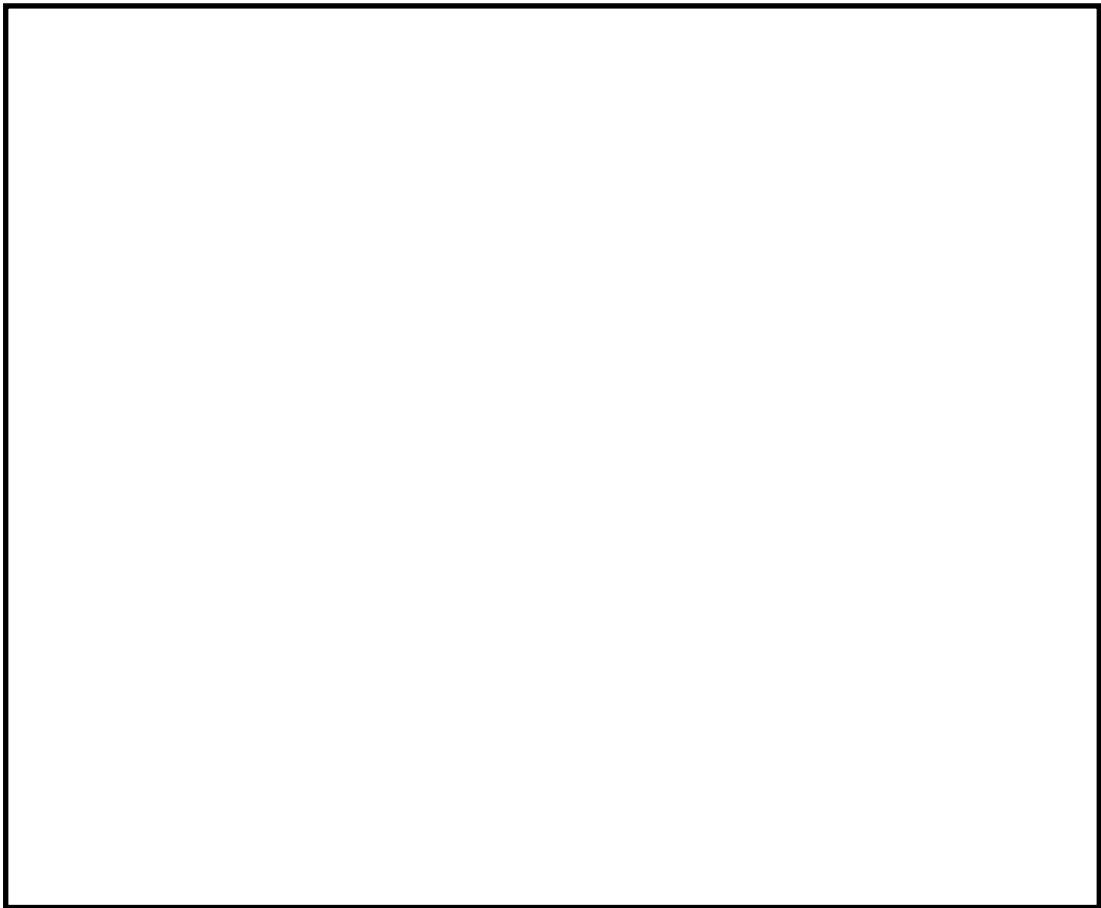

The pipe takes the
water to the
turbine.

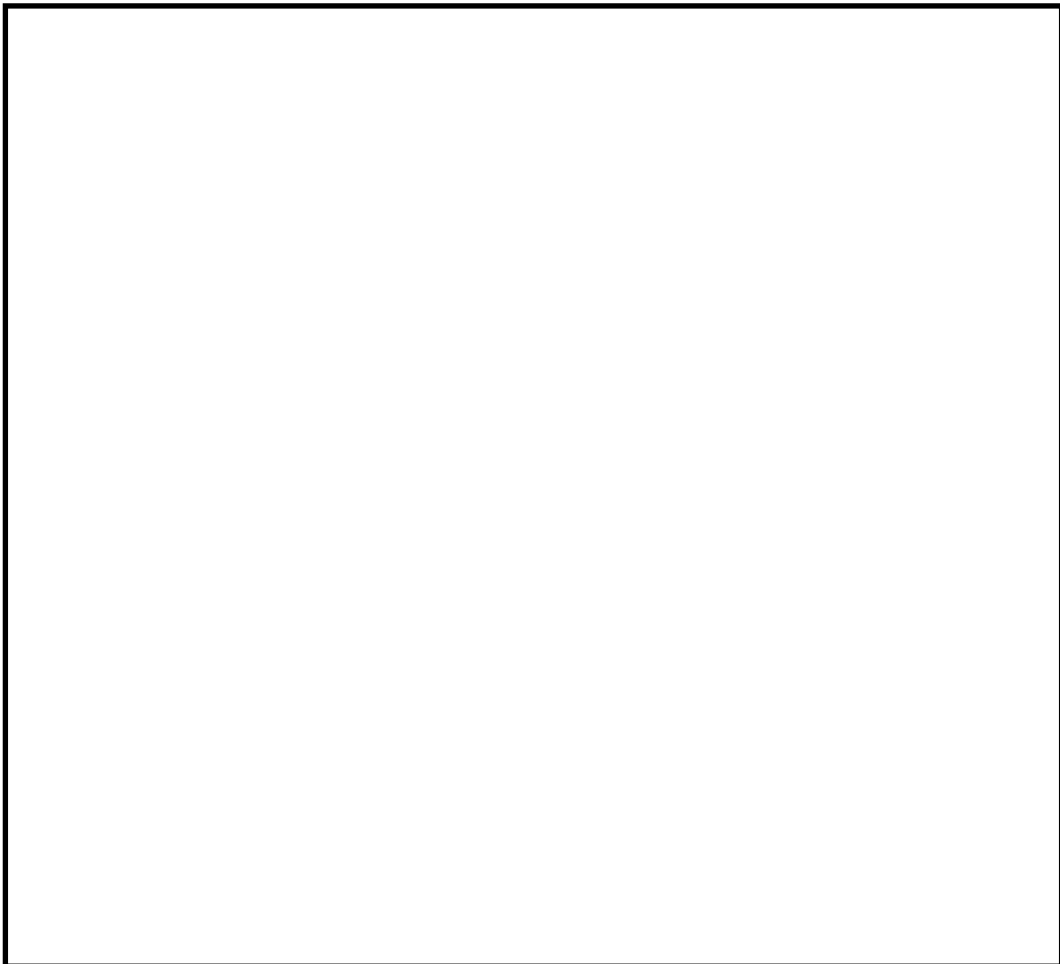

The turbine makes
electricity.

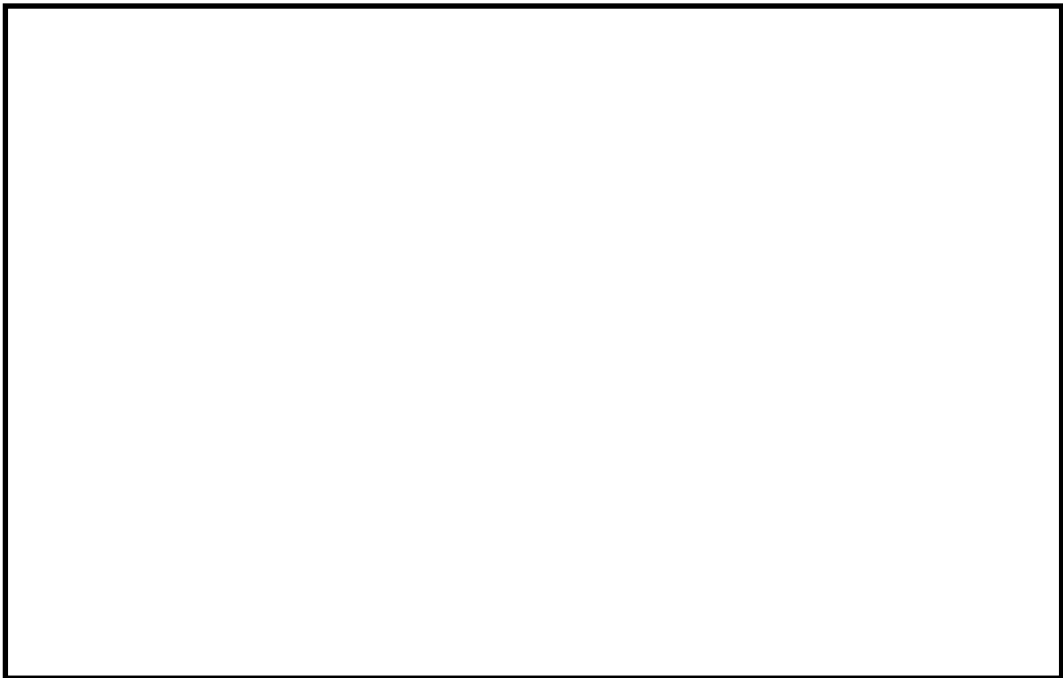

The water goes
from the turbine
into the fish pond.

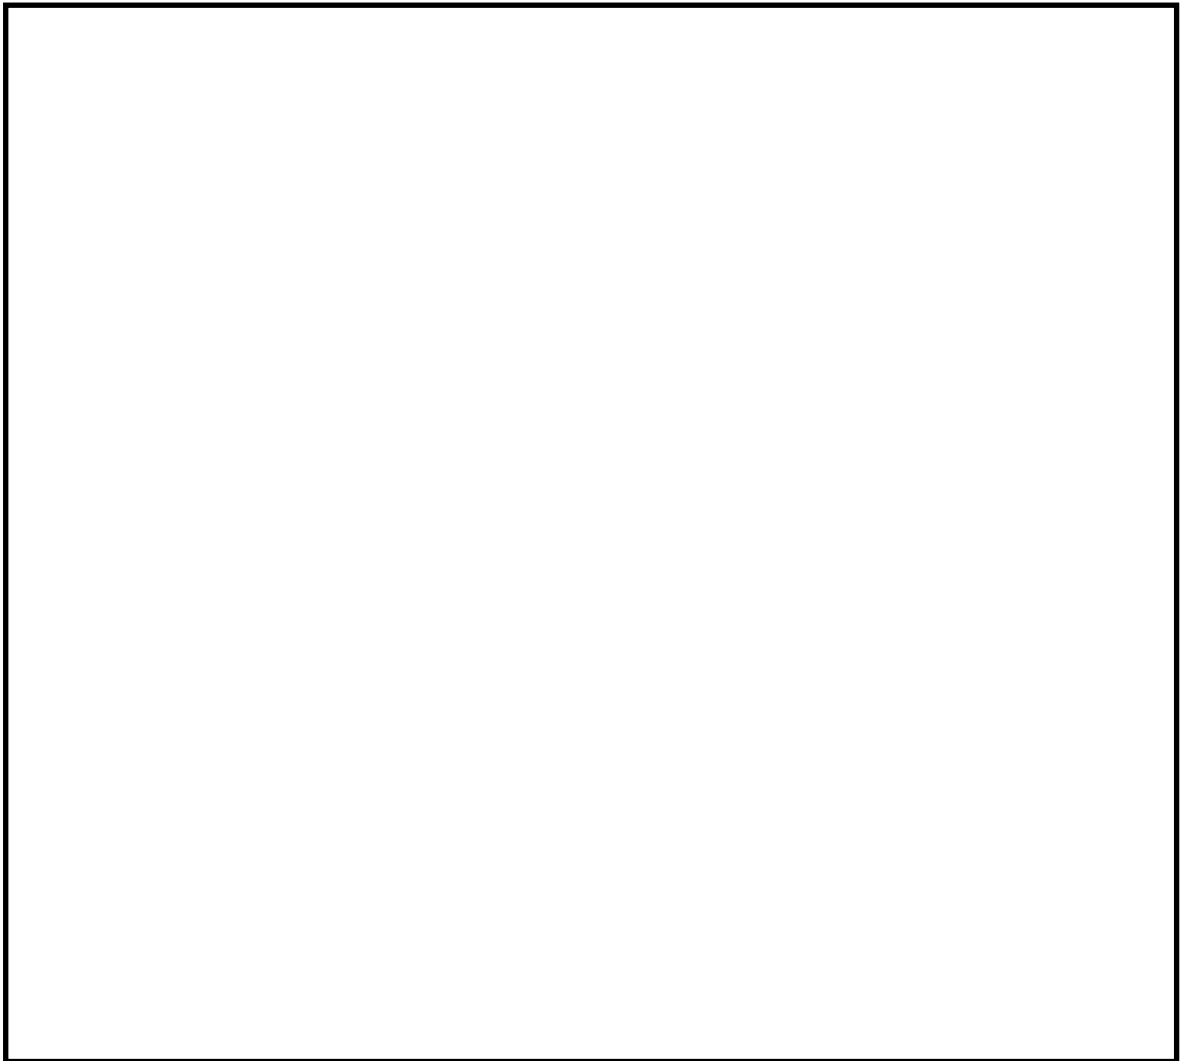

The water goes out
of the fish pond
and into a railway
carriage.

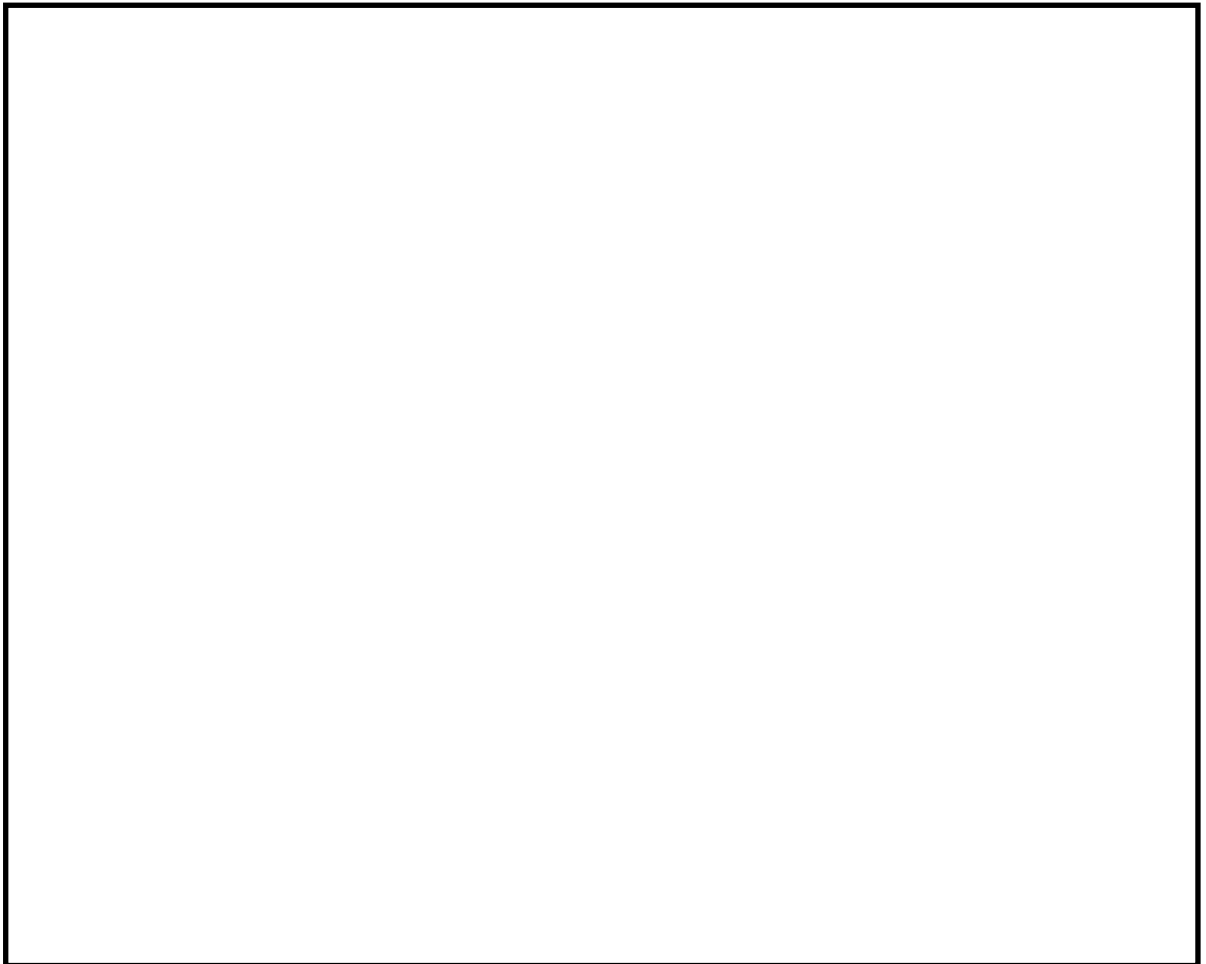

The water goes
down the hill under
the carriage.
The water is let out
and goes into the
river.

The water in the
river goes into the
sea.

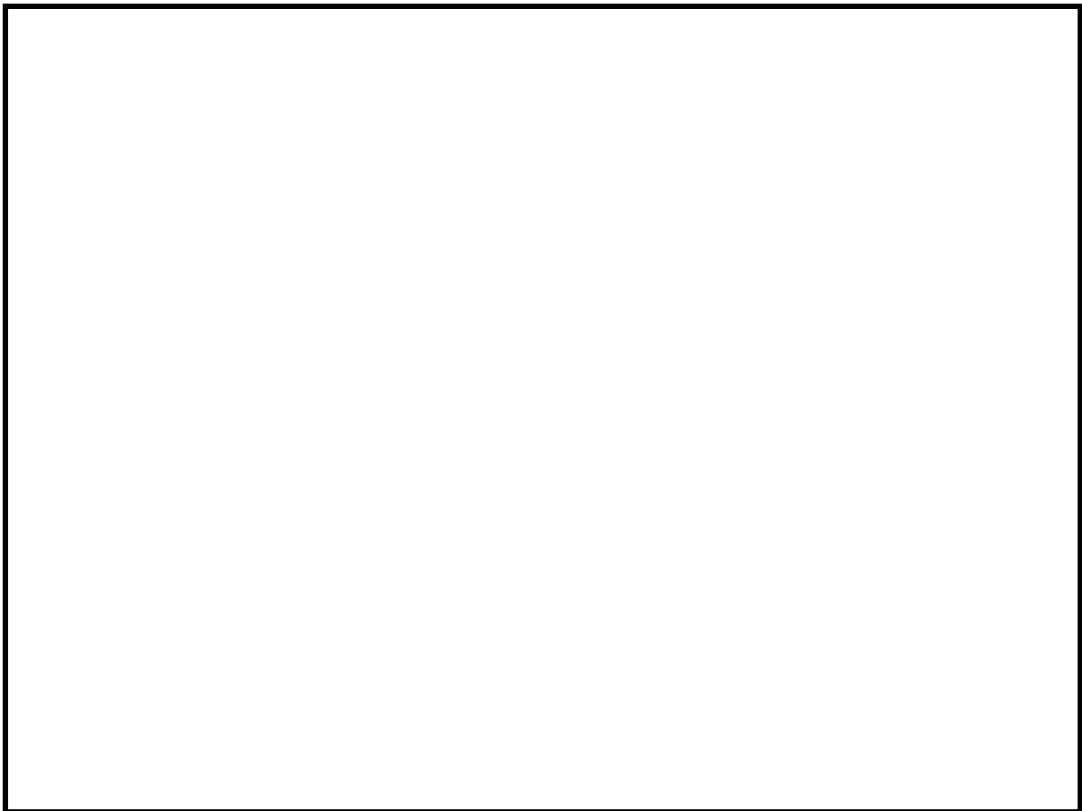

One day the water
will leave the sea.
It will change into
clouds.

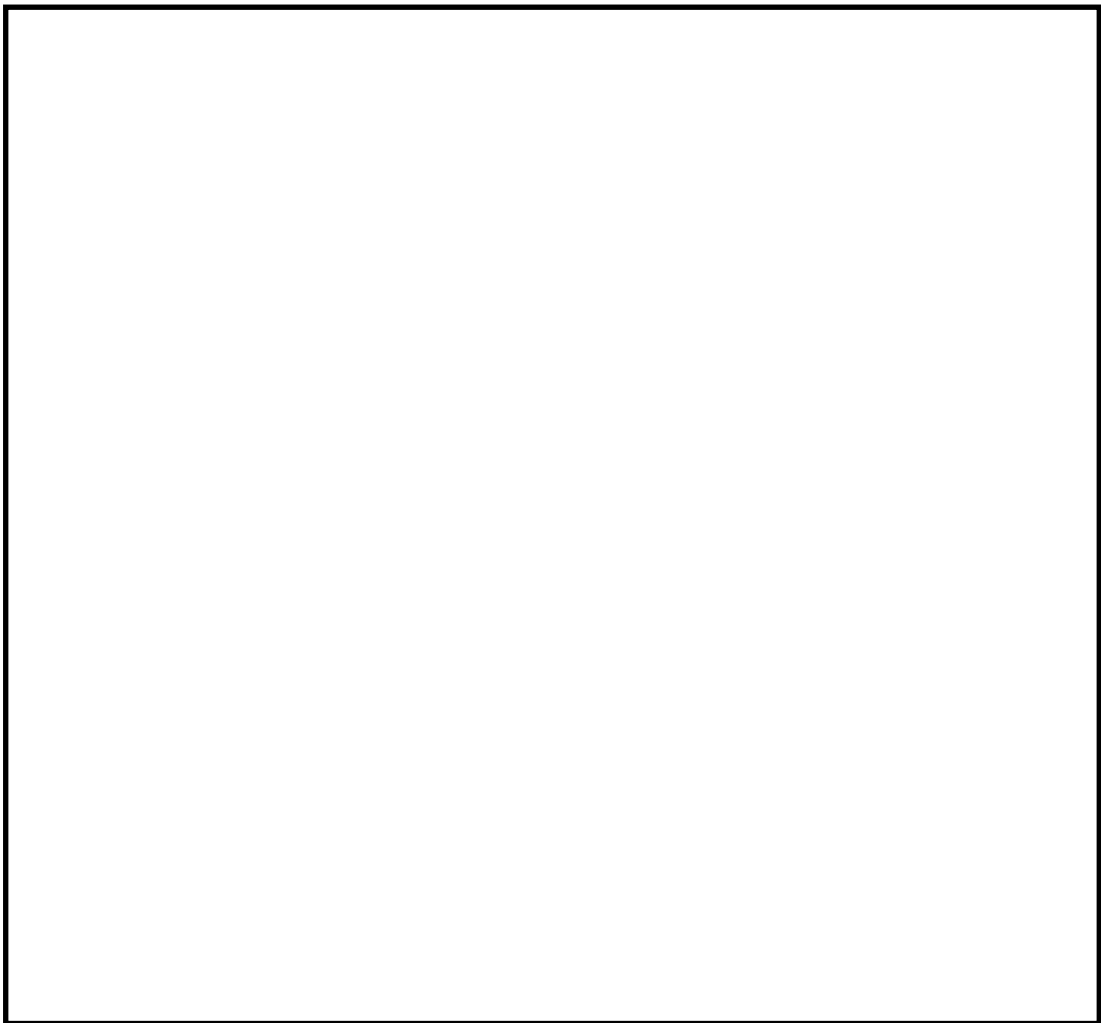

Rain comes from
clouds.

Some of the rain
will fall on the hills
near C.A.T.

Rainwater will
trickle into
streams.

The streams will go
into a reservoir in
the hills above
C.A.T.

The water will come
out of the
reservoir.

Guess where the
water will go?
